

Dr. Greg Smith is an Associate Professor of Biological Sciences at Kent State University at Stark. His research interests focus on Wildlife Ecology and Conservation Biology. More specifically, Dr. Smith's work investigates how and why populations are structured across space and time, including the influence of human-dominated landscapes on native species. Dr. Smith received a B.S. in Zoology from the University of Florida, an M.S. in Biological Sciences with a minor in Statistics from Mississippi State University, and a Ph.D. in Zoology from the University of Oklahoma. Dr. Smith is the current Chair of The Wildlife Society's Biological Diversity Working Group and is a former Executive Director of the Ohio Biological Survey. He is an avid reader of natural history, a fan of local sports teams, and a self-professed nerd.
